the ontology part of the book is shown first in the title because of its more general weightier meaning but it has emerged from the theaetetus part and is thus found after it both parts of the book can be read largely independently of each other on the theaetetus part the dialogue theaetetus is dedicated to the question knowledge what is it actually in the dialogue it is problematized how in principle a general concept thus also the concept of knowledge can be determined in the process the famous dynamis passage plays an essential role to the passage substantial new issues are shown in addition there is a new perspective on the attempts in the initial dialogue part to determine what knowledge is on the ontology part here starting from the dialogue phaedo a model of plato s ontology is developed with provided means of mathematical logic the model in particular his determination of concept enables to the author s knowledge a partially new understanding of plato s so called theory of ideas

this book describes a new formulation of logic it appears to resolve all of the paradoxes that have beset logic since the 19th century as well as the liar paradox that dates from early greek times it also reduces the importance of godel s undecidability theorem by showing how to generally and consistently exclude undecidable propositions from a mathematical deductive system or its corresponding calculus the reduced system or calculus then is fully decidable all propositions in the system are either provably true or false we thus view paradoxes and other undecidable statements as the result of an inadequate c number symbolic linguistic formulation of logic that is remedied by an operator q number formulation of logic remarkably the basis of this new formulation is in the general measurement theory of quantum phenomena the new formulation of logic uses quantum measurement theory to create an operator q number based logic using godel numbers throughout for signs symbols thus our deepest knowledge of physical reality is the source of a new paradox free operator formulation of logic which we call operator logic operator logic is not related to boolean algebra previous formulations of logic were based on human languages or intuition or everyday physical experience or ideal concepts of the human mind or some combination thereof our formulation is rooted in the deepest known bedrock of the physical universe thus we achieve a unique foundation for logic of the

greatest depth and magnitude after developing operator logic we show how plato s theory of ideas and reality and their mathematical relation is mirrored by the development of the standard model of elementary particles from the mathematical framework of operator logic this book therefore can be viewed as the precursor of the derivation of the standard model given in blaha s book a complete derivation of the form of the standard model with a new method to generate particle masses together these books provide an implementation of plato s qualitative theoretic framework which in this author s view is quite remarkable this book assumes some knowledge of logic matrices and group theory knowledge of quantum theory is not required but some knowledge of elementary particles and their interactions is helpful quantum concepts are developed as required
